

Summer 2013

Quarterly

Things are already heating up this year so we've gotten our Summer Quarterly out to help keep your puzzling cool.

Trividoku puzzles combine trivia knowledge and Sudoku. A standard Trividoku has nine trivia matches – for example, if the topic of the puzzle was “State Capitals”, then you might match “Denver – Colorado”, “Sacramento – California” and so on. Each time you make a match you discover another digit to fill into the puzzle. This summer we've included three new puzzles: one in honor of Fathers' Day, a hot one about the deserts of the world and a Triple Trividoku titled: “What I did on my summer vacation”.

We've included two new Stars & Stripes puzzle where we go beyond 1-9 to have twelve spaces in each row, column and 3x4 box. You'll need to fill each of these in with 1 – 9 as well as three ‘*’s.

For Sudoku Island puzzles we start off with a regular 9 x 9 grid then put in four islands, each of which has nine spaces. So in addition to having 1-9 in each row, column and 3x3 box, the islands also have the digits 1-9.

A Sudoku Earthquake puzzle adds a “fault line” to the Sudoku puzzle. Below the puzzle we'll tell you all the digits that fit into the fault – it's up to you to figure out where they go.

We've also included several other new puzzle styles for your Summer Sudoku Celebration.

Answers to the puzzles can be found on pages 12 - 14.

All Sudoku-USA books have more than 100 Sudoku variation puzzles and are available on Amazon.com, directly from Sudoku-USA.com or by special order from your local bookstore.

In this puzzle, the rows and columns have 1-9 as normal, but instead of regular 3x3 boxes, use the dark lines to find the nine shapes which also contain 1-9.

9

Here & There

This puzzle also has rows and columns with 1-9, but there are now 8 separate shaded areas and nine individual squares ().

Each of the shaded areas contains 8 different digits, each of them is missing a single digit. No two shaded areas will be missing the same digit.

The nine individual squares () together will have 1-9 in them uniquely.

In this puzzle, the three digits appearing to the right of the rows appear in that row next to each other - but not necessarily in that order. For example, 123 could mean they appear in that order, or 312, 132 and so on.

Here and There

In this puzzle, the three digits next to each row will appear in that row in the order given but may or may not be next to each other. So with 1 2 3, the '1' will appear somewhere to the left of the '2' and '3' and the '2' somewhere to the left of the '3'.

4 → 3 → 8

4 → 5 → 8

7 → 5 → 2
